## Personal Statement

I am a curious guy essentially, an enthusiastic mobile and web software developer, looking to create solutions with great products, and expand my knowledge base in a practical and fast-paced work environment.

My main goal is to assume a role that allows me to take responsibility for the design of user products, with more focus directed toward user experience and interface design while further developing my skillset.

## Work Experience.

January 2022 - December 2022

Software Engineer

### Senseg Inc

- Built up the Senseg V1 app from the ground up using Flutter with Dart in order to leverage the power of Android and iOS while utilizing only one codebase.
- Built up the Senseg V2 public-facing website using React and Material UI, which would serve as a point of reference for users looking to learn more about the service.
- Built RESTful APIs using NodeJS to verify phone numbers during sign-up on mobile, and also power the merchant charge experience on the web.
- Built internal tools using NodeJS and React to process and approve/deny transaction requests.
- Conducted testing, reviewed, and contributed code for the Senseg V2 app.

## Highlighted Software Projects.

**FoodyShare** - Flutter framework, December 2021

[URL](#), [Source code](#)

Foodyshare is essentially a recipe-sharing application that also comes with categories into which specific food types are easily saved and accessed.

- Made use of various Firebase services such as storage, and Firestore datastore to store and group user and recipe information.

**Wall-It** - Java and Android platform, June 2020

[URL](#), [Source code](#)

Wall-It is an application that allows one to change the thematic appearance of one's phone.

- Implemented Unsplash's API to provide the app with a catalog of photos.
- Implemented the Realm database to store favorite photos.

**WhatsApp2** - Java and Android platform, June 2020

[URL](#), [Source code](#)

WhatsApp2 is a clone of the popular chat application WhatsApp and still maintains its base minimal features.

- Made use of various Firebase services such as storage and real-time database to store and group user and chat data.

### **Technical Skills.**

Strong: Flutter with Dart, Swift, UIKit, SwiftUI.

Experienced: Javascript, Typescript, Angular, React, Java for Android.

### **Personal Skills**

- Strong willingness to learn new skills and build upon existing ones.
- A team player who can work efficiently in a group setting.
- A problem solver through logical thinking.

### **Academic Qualifications.**

Moringa School.

February 2020 - July 2020

Software development, Android Specialization.

### **Volunteer Activities.**

Member, Welfare Society -Mang'u High School.

- Delivered basic necessities such as food to the less fortunate in the surrounding localities.

**Interests**

- Reading: Major fan of non-fiction books. Helps with goal orientation.
- Hiking: A fan of nature, having traversed the Ngong Hills and Mt.Longonot.
